

## Enable Data Collection in the Field for Projects, Applications, and Audits

energyOrbit Mobile is an extension of the energyOrbit DSM Operations Platform that enables users to easily collect various types of data for projects, applications, and audits while in the field, thus reducing paperwork, administrative expense, and data transcription errors and omissions. energyOrbit Mobile is designed for iOS tablets (iPad, iPad Mini), the most popular enterprise-ready platform available today, and connects seamlessly to the energyOrbit cloud-based platform for download of project data and upload of most-recent data and images from customer sites.

- ➔ Upload project-level or location-specific notes, photographs, or other configurable values to support project, application, inspection and audit processing
- ➔ Electronically capture signatures for applications and customer verification
- ➔ Enter and update measure data, including quantity, measure-specific values, as well as information about the installation location
- ➔ Answer survey questions on the device to collect any type of information about each project for record keeping, marketing, or verification purposes
- ➔ Can be used either with or without an Internet connection, ensuring that field crews can continue to work regardless of connectivity
- ➔ Stores only the data needed for the work which is scheduled for completion; customer data is not retained after each batch is returned to the server, thus increasing data security and customer privacy
- ➔ Stored data is encrypted on the device for additional security
- ➔ Can be further configured and co-branded to reinforce a program or utility brand among users
- ➔ Is enhanced and updated regularly to incorporate the best features from the energyOrbit DSM operations platform

**Why energyOrbit Mobile?** Unlike standalone energy efficiency mobile apps, energyOrbit Mobile integrates directly with the energyOrbit DSM Operations Platform, eliminating the need to transfer data among disparate systems. While generic CRM mobile apps are not optimized for the typical process and workflow encountered by field personnel managing energy efficiency programs, energyOrbit Mobile is engineered to optimize efficient and accurate data entry in the EE program field environment.

## energyOrbit Mobile Benefits

- ➔ Improves field staff and trade ally productivity
- ➔ Reduces or eliminates paperwork and data collection errors
- ➔ Accelerates rebate processing and payments
- ➔ Enhances collaboration and relationships with customers and trade allies
